

ShapeColor

```
import java.applet.Applet;
import java.awt.*;
import java.awt.event.*;

public class ShapeColorApplet extends Applet implements ItemListener {

    Choice shapeChoice;
    Choice colorChoice;

    public void init() {
        setLayout(new FlowLayout());

        // Shape drop-down
        shapeChoice = new Choice();
        shapeChoice.add("Line");
        shapeChoice.add("Rectangle");
        shapeChoice.add("Oval");

        // Color drop-down
        colorChoice = new Choice();
        colorChoice.add("Red");
        colorChoice.add("Green");
        colorChoice.add("Blue");
        colorChoice.add("Yellow");

        add(new Label("Select Shape:"));
        add(shapeChoice);

        add(new Label("Select Color:"));
        add(colorChoice);

        shapeChoice.addItemListener(this);
        colorChoice.addItemListener(this);
    }

    public void itemStateChanged(ItemEvent e) {
        repaint();
    }

    public void paint(Graphics g) {
        String shape = shapeChoice.getSelectedItem();
        String color = colorChoice.getSelectedItem();

        // Set selected color
        if (color.equals("Red")) {
            g.setColor(Color.RED);
        } else if (color.equals("Green")) {
            g.setColor(Color.GREEN);
        } else if (color.equals("Blue")) {
            g.setColor(Color.BLUE);
        } else if (color.equals("Yellow")) {
```

```

        g.setColor(Color.YELLOW);
    }

    // Draw selected shape
    if (shape.equals("Line")) {
        g.drawLine(100, 150, 300, 150);
    } else if (shape.equals("Rectangle")) {
        g.drawRect(100, 120, 200, 100);
    } else if (shape.equals("Oval")) {
        g.drawOval(100, 120, 200, 100);
    }
}
}

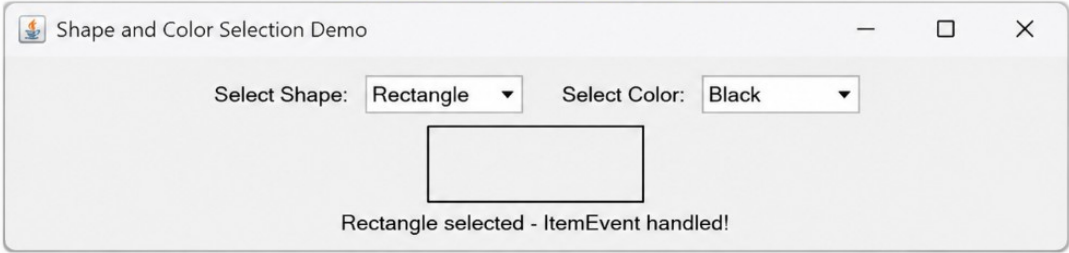

```

Output:

1. Initial UI (Before any interaction)

2. After selecting the shape (ItemEvent)

3. After selecting the color (ItemEvent)
