Level 1 — Easy (E) Sqrt — Numbers

Write a program to find the square root of a perfect square number(print both the positive and negative values)

Sample Input:

Enter the number : 6561

Sample Output:

Square Root: 81, -81

1. 1225
2. 9801
3. 1827
4. -100
5. 0

Your Code

```
1 import java.util.Scanner;
2 public class Main{
3     public static void main(String[] args){
4         Scanner sc = new Scanner(System.in);
5         int n = sc.nextInt();
6         if (n<0){
7             System.out.println("Invalid Input");
8             return;
9         }
10        int root = -1;
11        for (int i = 0; i<=n; i++){
12            if (i*i == n){
13                root = i;
14                break;
15            }
16        }
17        System.out.println(root + " " + -root);
18    }
19 }
```

Program Input (stdin)

6561

Output

81, -81

Run

Level 1 — Easy (E) Fibonacci — Loops

Java Program to Find Even Sum of Fibonacci Series Till number N?

Sample Input: n = 4

Sample Output: 33

(N = 4, So here the fibonacci series will be produced from 0th term till 8th term: 0, 1, 1, 2, 3, 5, 8, 13, 21)

Sum of numbers at even indexes = 0 + 1 + 3 + 8 + 21 = 33)

Your Code

```
1 import java.util.Scanner;
2 class Main{
3     public static void main(String[] args){
4         Scanner sc = new Scanner(System.in);
5         int n = sc.nextInt();
6         int a = 0, b=1;
7         int sum = 0;
8         for (int i = 0; i<=2*n; i++){
9             if (i%2==0){
10                 sum+=a;
11             }
12             int c = a+b;
13             a = b;
14             b = c;
15         }
16         System.out.println(sum);
17     }
18 }
```

Program Input (stdin)

4

Output

33

Run

Level 1 — Easy (E) Vow's-Con's — Strings

Write a program to print consonants and vowels separately in the given word

Sample Input:

Given Word: Engineering

Sample Output:

Consonants: n g n r n g

Vowels: e i e e i

1. TRY
2. MEDIAN
3. ONE
4. KNOWLEDGE
5. EDUCATION

Your Code

```
1 import java.util.*;  
2 class Main{  
3     public static void main(String[] args){  
4         Scanner sc = new Scanner(System.in);  
5         String s = sc.next();  
6         System.out.print("Consonants: ");  
7         for (int i = 0; i < s.length(); i++){  
8             char ch = s.charAt(i);  
9             if (ch != 'a' && ch != 'e' && ch != 'i' && ch != 'o'  
10                System.out.print(ch+" ");  
11         }  
12     }  
13     System.out.println();  
14 }
```

Program Input (stdin)

Engineering

Output

```
Consonants: n g n r n g  
Vowels: e i e e i
```

Level 1 — Easy (E) Composite — Array

Write a program to find the number of composite numbers in an array of elements

Sample Input::

Array of elements = {16, 18, 27, 16, 23, 21, 19}

Sample Output:

Number of Composite Numbers = 5

1. Array of elements = {26, 28, 37, 26, 33, 31, 29}
2. Array of elements = {1.6, 1.8, 2.7, 1.6, 2.3, 2.1, .19}
3. Array of elements = {0, 160, 180, 270, 160, 230, 210, 190, 0}
4. Array of elements = {200, 180, 160, 270, 270, 270, 190, 200}
5. Array of elements = {100, 100, 100, 100, 100, 100, 100, 100}

Your Code

```
1: import java.util.*;
2: class Main{
3:     public static void main(String[] args){
4:         Scanner sc = new Scanner(System.in);
5:         int n = sc.nextInt();
6:         int count = 0;
7:         for (int i = 0; i < n; i++){
8:             int num = sc.nextInt();
9:             if (num > 3){
10:                 int factors = 0;
11:                 for (int j = 2; j < num; j++){
12:                     if (num % j == 0){
13:                         factors++;
14:                     }
15:                 }
16:                 if (factors > 1){
17:                     count++;
18:                 }
19:             }
20:         }
21:         System.out.println(count);
22:     }
23: }
```

Program Input (stdin)

16
23
21
19

Output

Number of composite Numbers = 5
